IEE Proceedings

GENERATION, TRANSMISSION AND DISTRIBUTION

The Institution of Electrical Engineers, Savoy Place, London WC2R 0BL, United Kingdom
Publishing Department: Michael Faraday House, Six Hills Way, Stevenage, Herts. SG1 2AY, United Kingdom

Volume 145 1998 UK ISSN 1350–2360

HONORARY EDITORS

Prof. E.J. Handschin (*University of Dortmund*) Prof. J.R. McDonald (*University of Strathclyde*)
Prof. J.R. Smith (*University of Strathclyde*) Dr. B. Fox (*The Queen's University of Belfast*)

Pages in issues of *IEE Proc., Gener. Transm. Distrib.* 1998

Pages	Issue No.	Date
1–104	1	January
105–216	2	March
217–344	3	May
345–480	4	July
481–620	5	September
621–760	6	November

AUTOMATIC TEST SYSTEMS

Model-based analysis of protection system performance p547

CABLES AND OVERHEAD LINES

Digital distance relaying algorithm for first-zone protection for parallel transmission lines p531
Dynamic quadrature booster as an aid to system stability p41
Earth-return path impedances of underground cables. I. Numerical integration of infinite integrals p621
Earth-return path impedances of underground cables. II. Evaluations using neural networks p627
Effect of realistic system modelling on low-voltage capacitor transient overvoltages p682
Effect of surface charge on hydrophobicity levels of insulating materials p675
Fault synthetic recognition for an EHV transmission line using a group of neural networks with a time-space property p265
Improved symmetrical component-based fault distance estimation for digital distance protection p739
Incomplete Faraday cage effect of helicopters used in platform live-line maintenance p145
Method to improve digital distance relay impedance measurement when used in series compensated lines protected by a metal oxide varistor p403
Multiple regression technique for estimating the insulation strength of series dielectrics on distribution systems: a statistical approach p189
Online leakage current monitoring of 400 kV insulator strings in polluted areas [reply] p480
Performance of uncompensated and series capacitor-compensated 500 kV long transmission line under subnormal frequency conditions p315
Technical and economical optimisation of overhead power distribution line lightning protection p239
Time-domain model for multiconductor power transmission lines p473

CIRCUIT BREAKERS

Dynamic quadrature booster as an aid to system stability p41
Possibilistic-diagnosis theory for fault-section estimation and state identification of unobserved protective relays using tabu-search method p722

CLOSED LOOP SYSTEMS

Robust decentralised control design using genetic algorithms in power system damping control p1

COMPUTER APPLICATIONS

Application of genetic algorithms for control design in power systems p345
Application of STATCOMs to wind farms p511
Control strategy for grid-connected DC-AC converters with load power factor correction p487
Decentralised load-frequency controller design based on structured singular values p7
Dynamic quadrature booster as an aid to system stability p41
Model-based analysis of protection system performance p547
Real-time contingency evaluation and ranking technique p517

CONTROL SYSTEM ANALYSIS

Algorithm for automatic generation of fuzzy rules applied to power system controllers p161
Application of genetic algorithms for control design in power systems p345
Application of STATCOMs to wind farms p511
Control strategy for grid-connected DC-AC converters with load power factor correction p487
Decentralised load-frequency controller design based on structured singular values p7
Design of reduced-order observer-based variable structure power system stabiliser for unmeasurable state variables p525
Development of a SMES system as a fluctuating load compensator p700
Dynamic quadrature booster as an aid to system stability p41
Excitation control system for use with synchronous generators p537
Fuzzy logic based unified power flow controllers for transient stability improvement p225
New multi-objective stochastic search technique for economic load dispatch p747
Optimal multiobjective SVC planning for voltage stability enhancement p203
Optimal robust control design of static VAr compensators p301
Power flow control with controllable reactive series elements p493
Real-time contingency evaluation and ranking technique p517
Robust decentralised control design using genetic algorithms in power system damping control p1
Secondary voltage control: nonlinear selection of pilot buses, design of an optimal control law, and simulation results p77
Self-excited induction generator with excellent voltage and frequency control p33
Voltage stability assessment with inclusion of hard limits p505

CONTROL SYSTEM SYNTHESIS

Algorithm for automatic generation of fuzzy rules applied to power system controllers p161
Application of genetic algorithms for control design in power systems p345
Control strategy for grid-connected DC-AC converters with load power factor correction p487
Decentralised load-frequency controller design based on structured singular values p7
Design of decentralised output feedback TCSC damping controllers by using simulated annealing p553
Design of reduced-order observer-based variable structure power system stabiliser for unmeasurable state variables p525
Development of a SMES system as a fluctuating load compensator p700
Excitation control system for use with synchronous generators p537
Fuzzy logic based unified power flow controllers for transient stability improvement p225
New multi-objective stochastic search technique for economic load dispatch p747
Optimal multiobjective SVC planning for voltage stability enhancement p203
Optimal robust control design of static VAr compensators p301
Robust decentralised control design using genetic algorithms in power system damping control p1
Secondary voltage control: nonlinear selection of pilot buses, design of an optimal control law, and simulation results p77
Self-excited induction generator with excellent voltage and frequency control p33

CONVERTORS

Analysis of a novel solid state voltage regulator for a self-excited induction generator p647
Control strategy for grid-connected DC-AC converters with load power factor correction p487
Development of a SMES system as a fluctuating load compensator p700
Dynamic quadrature booster as an aid to system stability p41
Electric-power-quality improvement using parallel active-power conditioners p597
Generalised bridge converter model for electromagnetic transient analysis p423
PWM drives: voltage-type harmonic sources in power systems p293
Self-excited induction generator with excellent voltage and frequency control p33
Static VAr compensator (STATCOM) based on single-phase chain circuit converters p381
Steady-state model of direct connected generator-HVDC converter units in the harmonic domain p559

ELECTRIC DISCHARGES

Effect of surface charge on hydrophobicity levels of insulating materials p675
Multiple regression technique for estimating the insulation strength of series dielectrics on distribution systems: a statistical approach p189

ELECTROMAGNETIC THEORY

Modelling a positive lightning downward leader to study its effects on engineering systems p395

ELECTROMAGNETISM

Electric field analysis for a static induction type of voltage sensor in three-phase power distribution systems p437
Loss and current distribution in foil windings of transformers p709
Measurements of power system voltages using remote electric field monitoring p217
Modelling a positive lightning downward leader to study its effects on engineering systems p395

ELECTRIC VARIABLES CONTROL

Analysis of a novel solid state voltage regulator for a self-excited induction generator p647
Application of STATCOMs to wind farms p511
Control strategy for grid-connected DC-AC converters with load power factor correction p487
Decentralised load-frequency controller design based on structured singular values p7
Design of decentralised output feedback TCSC damping controllers by using simulated annealing p553
Effects of unified power flow controllers on transient stability p182
Excitation control system for use with synchronous generators p537
Fuzzy inference system to assist the operator in reactive power control in distribution systems p133
Fuzzy logic based unified power flow controllers for transient stability improvement p225
Incorporation of a UPFC model in an optimal power flow using Newton's method p336
Optimal multiobjective SVC planning for voltage stability enhancement p203
Optimal robust control design of static VAr compensators p301
Power flow control with controllable reactive series elements p493
Real-time contingency evaluation and ranking technique p517
Secondary voltage control: nonlinear selection of pilot buses, design of an optimal control law, and simulation results p77
Self-excited induction generator with excellent voltage and frequency control p33
Steady-state model of direct connected generator-HVDC converter units in the harmonic domain p559
Voltage stability assessment with inclusion of hard limits p505

ENERGY CONVERSION

Control strategy for grid-connected DC-AC converters with load power factor correction p487
Development of a SMES system as a fluctuating load compensator p700

EXPERT SYSTEMS

Artificial intelligence in diagnosis and supply restoration for a distribution network p444
Earth-return path impedances of underground cables. II. Evaluations using neural networks p627
Fuzzy decision-making model to determine the parameters for intelligent design of power system protection p169
Fuzzy inference system to assist the operator in reactive power control in distribution systems p133
Intelligent system for fault diagnosis on low voltage distribution networks p592
Model-based analysis of protection system performance p547
Practical implementation of a hybrid fuzzy neural network for one-day-ahead load forecasting p687

FEEDBACK

Decentralised load-frequency controller design based on structured singular values p7
Design of decentralised output feedback TCSC damping controllers by using simulated annealing p553
Effects of unified power flow controllers on transient stability p182
Excitation control system for use with synchronous generators p537

FUZZY CONTROL

Algorithm for automatic generation of fuzzy rules applied to power system controllers p161
Fuzzy inference system to assist the operator in reactive power control in distribution systems p133
Fuzzy logic based unified power flow controllers for transient stability improvement p225

INDUCTION MOTORS

Analysis of a novel solid state voltage regulator for a self-excited induction generator p647
Application of STATCOMs to wind farms p511
PWM drives: voltage-type harmonic sources in power systems p293
Self-excited induction generator with excellent voltage and frequency control p33

INSTRUMENTATION AND MEASUREMENT

Electric field analysis for a static induction type of voltage sensor in three-phase power distribution systems p437
Measurements of power system voltages using remote electric field monitoring p217

INSULATED GATE FIELD EFFECT TRANSISTORS

Development of a SMES system as a fluctuating load compensator p700

INSULATORS AND INSULATION

Multiple regression technique for estimating the insulation strength of series dielectrics on distribution systems: a statistical approach p189

MATERIALS AND MATERIALS TESTING

Multiple regression technique for estimating the insulation strength of series dielectrics on distribution systems: a statistical approach p189

MATHEMATICAL TECHNIQUES

Application of genetic algorithms for control design in power systems p345
Approach for bus frequency estimating in power system simulations p431
Comparison between evolutionary programming and a genetic algorithm for fault-section estimation p616
Demand-side optimal selection of switching devices in radial distribution system planning p409
Design of decentralised output feedback TCSC damping controllers by using simulated annealing p553
Electromagnetic transient simulation of power systems using root-matching techniques p481
Fuzzy decision-making model to determine the parameters for intelligent design of power system protection p169
Generalised bridge converter model for electromagnetic transient analysis p423
Hydrothermal generation scheduling package: a genetic based approach p451
Incorporation of a UPFC model in an optimal power flow using Newton's method p336
Inherent structure theory of networks and power system harmonics p123
Long-term hydrothermal scheduling using composite thermal and composite hydro representations p210
Modelling a positive lightning downward leader to study its effects on engineering systems p395
Multi-area unit commitment for large-scale power systems p415
New multi-objective stochastic search technique for economic load dispatch p747
Optimal multiobjective SVC planning for voltage stability enhancement p203
Optimal weight assessment based on a range of objectives in a multiobjective optimal load flow study p65
Possibilistic-diagnosis theory for fault-section estimation and state identification of unobserved protective relays using tabu-search method p722
Practical application of evolutionary computing to reactive power planning p753
Protection co-ordination: determination of the break point set p717
Reactive power optimisation using an analytic hierarchical process and a nonlinear optimisation neural network approach p89
Reduction of harmonic currents generated by discharge lamp systems p363
Robust algorithm for load estimation in distribution networks p499
Scheduling of radio-controlled heating load p641
Secondary voltage control: nonlinear selection of pilot buses, design of an optimal control law, and simulation results p77
Sensitivity analysis for transient stability studies p669
Steady-state model of direct connected generator-HVDC converter units in the harmonic domain p559
Stochastic multiobjective generation dispatch of combined heat and power systems p583
Tabu search based approach to trouble call analysis [in LV power distribution] p731
Technical and economical optimisation of overhead power distribution line lightning protection p239
Time-domain model for multiconductor power transmission lines p473
Transmission system expansion planning by an extended genetic algorithm p329
Unit commitment by tabu search p56
Validation of a clustering algorithm for voltage stability analysis on the Bosnian electric power system p21
Weighted-norm approach for multiobjective VAr planning p369

MEASUREMENT OF SPECIFIC VARIABLES

Electric field analysis for a static induction type of voltage sensor in three-phase power distribution systems p437
Improved recursive Newton-type algorithm for power system relaying and measurement p15
Measurements of grounding resistances for high impulse currents p693
Measurements of power system voltages using remote electric field monitoring p217
Online leakage current monitoring of 400 kV insulator strings in polluted areas [reply] p480

MULTIPROCESSOR SYSTEMS

Parallel-in-time relaxed Newton method for transient stability analysis p155
Static security analysis using pipeline decomposition p105

MULTIVARIABLE CONTROL SYSTEMS

Algorithm for automatic generation of fuzzy rules applied to power system controllers p161
Decentralised load-frequency controller design based on structured singular values p7
Design of decentralised output feedback TCSC damping controllers by using simulated annealing p553
Design of reduced-order observer-based variable structure power system stabiliser for unmeasurable state variables p525
Excitation control system for use with synchronous generators p537
Robust decentralised control design using genetic algorithms in power system damping control p1

NEURAL NETS

Adaptive protection strategies for detecting power system out-of-step conditions using neural networks p387
Earth-return path impedances of underground cables. II. Evaluations using neural networks p627
Fault synthetic recognition for an EHV transmission line using a group of neural networks with a time-space property p265
Monitoring and assessment of voltage stability margins using artificial neural networks with a reduced input set p355
Parallel self-organising hierarchical neural network-based fast voltage estimation p98
Practical implementation of a hybrid fuzzy neural network for one-day-ahead load forecasting p687
Reactive power optimisation using an analytic hierarchical process and a nonlinear optimisation neural network approach p89

NONELECTRIC VARIABLES CONTROL

Scheduling of radio-controlled heating load p641

NONLINEAR CONTROL SYSTEMS

Excitation control system for use with synchronous generators p537
Fuzzy logic based unified power flow controllers for transient stability improvement p225

NUMERICAL ANALYSIS

Earth-return path impedances of underground cables. I. Numerical integration of infinite integrals p621
Earth-return path impedances of underground cables. II. Evaluations using neural networks p627
Electric field analysis for a static induction type of voltage sensor in three-phase power distribution systems p437
Electromagnetic transient simulation of power systems using root-matching techniques p481
Improved recursive Newton-type algorithm for power system relaying and measurement p15
Improved three-phase load flow using phase and sequence components p245
Incorporation of a UPFC model in an optimal power flow using Newton's method p336
Inherent structure theory of networks and power system harmonics p123
Loss and current distribution in foil windings of transformers p709
Parallel-in-time relaxed Newton method for transient stability analysis p155
Robust algorithm for load estimation in distribution networks p499
Undervoltage load shedding to avoid voltage instability p175
Validation of a clustering algorithm for voltage stability analysis on the Bosnian electric power system p21

OPTIMAL CONTROL

Algorithm for automatic generation of fuzzy rules applied to power system controllers p161
Application of genetic algorithms for control design in power systems p345
Application of STATCOMs to wind farms p511
Excitation control system for use with synchronous generators p537
Incorporation of a UPFC model in an optimal power flow using Newton's method p336
Optimal multiobjective SVC planning for voltage stability enhancement p203
Optimal robust control design of static VAr compensators p301
Robust decentralised control design using genetic algorithms in power system damping control p1
Secondary voltage control: nonlinear selection of pilot buses, design of an optimal control law, and simulation results p77

OPTIMISATION

Algorithm for automatic generation of fuzzy rules applied to power system controllers p161
Demand-side optimal selection of switching devices in radial distribution system planning p409

Incorporation of a UPFC model in an optimal power flow using Newton's method p336
Long-term hydrothermal scheduling using composite thermal and composite hydro representations p210
Multi-area unit commitment for large-scale power systems p415
Optimal weight assessment based on a range of objectives in a multiobjective optimal load flow study p65
Reduction of harmonic currents generated by discharge lamp systems p363
Technical and economical optimisation of overhead power distribution line lightning protection p239

PARALLEL PROCESSING

Parallel-in-time relaxed Newton method for transient stability analysis p155

PARAMETER ESTIMATION

Parallel self-organising hierarchical neural network-based fast voltage estimation p98
Robust algorithm for load estimation in distribution networks p499
Undervoltage load shedding to avoid voltage instability p175

POWER ENGINEERING COMPUTING

Adaptive protection strategies for detecting power system out-of-step conditions using neural networks p387
Application of genetic algorithms for control design in power systems p345
Application of STATCOMs to wind farms p511
Approach for bus frequency estimating in power system simulations p431
Artificial intelligence in diagnosis and supply restoration for a distribution network p444
Comparison between evolutionary programming and a genetic algorithm for fault-section estimation p616
Control strategy for grid-connected DC-AC converters with load power factor correction p487
Decentralised load-frequency controller design based on structured singular values p7
Digital distance relaying algorithm for first-zone protection for parallel transmission lines p531
Dynamic quadrature booster as an aid to system stability p41
Earth-return path impedances of underground cables. II. Evaluations using neural networks p627
Electromagnetic transient simulation of power systems using root-matching techniques p481
Fault synthetic recognition for an EHV transmission line using a group of neural networks with a time-space property p265
Fuzzy decision-making model to determine the parameters for intelligent design of power system protection p169
Generalised bridge converter model for electromagnetic transient analysis p423
Hydrothermal generation scheduling package: a genetic based approach p451
Intelligent system for fault diagnosis on low voltage distribution networks p592
Method to improve digital distance relay impedance measurement when used in series compensated lines protected by a metal oxide varistor p403
Model-based analysis of protection system performance p547
Monitoring and assessment of voltage stability margins using artificial neural networks with a reduced input set p355
Parallel-in-time relaxed Newton method for transient stability analysis p155
Parallel self-organising hierarchical neural network-based fast voltage estimation p98
Practical implementation of a hybrid fuzzy neural network for one-day-ahead load forecasting p687
Reactive power optimisation using an analytic hierarchical process and a nonlinear optimisation neural network approach p89
Real-time contingency evaluation and ranking technique p517
Simple dynamic equivalent for fast online transient stability assessment p49
Static security analysis using pipeline decomposition p105
System separation mechanism in the neighbourhood of a relevant type-n UEP using the normal form of vector fields p139

POWER SYSTEM CONTROL

Algorithm for automatic generation of fuzzy rules applied to power system controllers p161
Analysis of a novel solid state voltage regulator for a self-excited induction generator p647
Application of genetic algorithms for control design in power systems p345
Application of STATCOMs to wind farms p511
Control strategy for grid-connected DC-AC converters with load power factor correction p487
Decentralised load-frequency controller design based on structured singular values p7
Design of decentralised output feedback TCSC damping controllers by using simulated annealing p553
Design of reduced-order observer-based variable structure power system stabiliser for unmeasurable state variables p525
Development of a SMES system as a fluctuating load compensator p700
Dynamic quadrature booster as an aid to system stability p41
Effects of unified power flow controllers on transient stability p182
Excitation control system for use with synchronous generators p537
Fuzzy inference system to assist the operator in reactive power control in distribution systems p133
Fuzzy logic based unified power flow controllers for transient stability improvement p225
Incorporation of a UPFC model in an optimal power flow using Newton's method p336
New multi-objective stochastic search technique for economic load dispatch p747
Optimal multiobjective SVC planning for voltage stability enhancement p203
Optimal robust control design of static VAr compensators p301
Power flow control with controllable reactive series elements p493
Real-time contingency evaluation and ranking technique p517
Representation and control of high speed phase shifter for an electric power system p308
Robust decentralised control design using genetic algorithms in power system damping control p1
Scheduling of radio-controlled heating load p641
Secondary voltage control: nonlinear selection of pilot buses, design of an optimal control law, and simulation results p77
Selection of operating conditions for the co-ordinated setting of robust fixed-parameter stabilisers p111
Self-excited induction generator with excellent voltage and frequency control p33
Sensitivity analysis for transient stability studies p669
Steady-state model of direct connected generator-HVDC converter units in the harmonic domain p559
Voltage stability assessment with inclusion of hard limits p505

POWER SYSTEM MANAGEMENT

Algorithm for automatic generation of fuzzy rules applied to power system controllers p161
Application of genetic algorithms for control design in power systems p345
Application of STATCOMs to wind farms p511
Artificial intelligence in diagnosis and supply restoration for a distribution network p444
Control strategy for grid-connected DC-AC converters with load power factor correction p487
Cost-benefit analysis of generation additions in system planning p288
Decentralised load-frequency controller design based on structured singular values p7
Design of decentralised output feedback TCSC damping controllers by using simulated annealing p553
Design of reduced-order observer-based variable structure power system stabiliser for unmeasurable state variables p525
Dynamic quadrature booster as an aid to system stability p41
Effect of realistic system modelling on low-voltage capacitor transient overvoltages p682
Effects of unified power flow controllers on transient stability p182
Excitation control system for use with synchronous generators p537
Fault synthetic recognition for an EHV transmission line using a group of neural networks with a time-space property p265
Formula for the effect of a static VAr compensator on synchronising torque coefficient [comment and reply] p759
Fuzzy inference system to assist the operator in reactive power control in distribution systems p133
Fuzzy logic based unified power flow controllers for transient stability improvement p225
Incorporation of a UPFC model in an optimal power flow using Newton's method p336
Multi-area unit commitment for large-scale power systems p415
New multi-objective stochastic search technique for economic load dispatch p747
Optimal multiobjective SVC planning for voltage stability enhancement p203
Optimal robust control design of static VAr compensators p301
Parallel self-organising hierarchical neural network-based fast voltage estimation p98
Power flow control with controllable reactive series elements p493
Probabilistic load flow for assessment of voltage instability p196
Real-time contingency evaluation and ranking technique p517
Reconciling pool and contract dispatch in open access transmission operations p468
Representation and control of high speed phase shifter for an electric power system p308
Robust decentralised control design using genetic algorithms in power system damping control p1
Scheduling of radio-controlled heating load p641
Secondary voltage control: nonlinear selection of pilot buses, design of an optimal control law, and simulation results p77
Selection of operating conditions for the co-ordinated setting of robust fixed-parameter stabilisers p111
Standing phase angle reduction for power system restoration p82
Static security analysis using pipeline decomposition p105
Static VAr compensator (STATCOM) based on single-phase chain circuit converters p381
Stochastic multiobjective generation dispatch of combined heat and power systems p583
Technical and economical optimisation of overhead power distribution line lightning protection p239
Three-phase active power line conditioner planning p281
Undervoltage load shedding to avoid voltage instability p175
Unit commitment by tabu search p56
Voltage stability assessment with inclusion of hard limits p505

POWER SYSTEM PROTECTION

Alternative earthing calculations for grids and rods p271
Digital distance relaying algorithm for first-zone protection for parallel transmission lines p531
Fuzzy decision-making model to determine the parameters for intelligent design of power system protection p169
Improved symmetrical component-based fault distance estimation for digital distance protection p739
Measurements of grounding resistances for high impulse currents p693
Method to improve digital distance relay impedance measurement when used in series compensated lines protected by a metal oxide varistor p403
Model-based analysis of protection system performance p547
Multiple regression technique for estimating the insulation strength of series dielectrics on distribution systems: a statistical approach p189
Possibilistic-diagnosis theory for fault-section estimation and state identification of unobserved protective relays using tabu-search method p722
Protection co-ordination: determination of the break point set p717
Tabu search based approach to trouble call analysis [in LV power distribution] p731
Technical and economical optimisation of overhead power distribution line lightning protection p239

POWER SYSTEMS AND APPLICATIONS

PWM drives: voltage-type harmonic sources in power systems p293
Reduction of harmonic currents generated by discharge lamp systems p363

POWER SYSTEMS AND PLANTS

Algorithm for failure frequency and duration assessment of composite power systems p117
Analysis of a novel solid state voltage regulator for a self-excited induction generator p647
Application of STATCOMs to wind farms p511
Approach for bus frequency estimating in power system simulations p431

Arnold diffusion in a particular multi-machine power system p257
Artificial intelligence in diagnosis and supply restoration for a distribution network p444
Comparative study of continuous distribution models for power system reliability evaluation p566
Comparison between evolutionary programming and a genetic algorithm for fault-section estimation p616
Control strategy for grid-connected DC-AC converters with load power factor correction p487
Cost-benefit analysis of generation additions in system planning p288
Demand-side optimal selection of switching devices in radial distribution system planning p409
Design of decentralised output feedback TCSC damping controllers by using simulated annealing p553
Digital distance relaying algorithm for first-zone protection for parallel transmission lines p531
Effect of realistic system modelling on low-voltage capacitor transient overvoltages p682
Electric field analysis for a static induction type of voltage sensor in three-phase power distribution systems p437
Electromagnetic transient simulation of power systems using root-matching techniques p481
Evaluation of existing optimal VAr planning tools on utility systems p663
Fault synthetic recognition for an EHV transmission line using a group of neural networks with a time-space property p265
Formula for the effect of a static VAr compensator on synchronising torque coefficient [comment and reply] p759
Future load curve shaping based on similarity using fuzzy logic approach p375
High-impedance fault identification using a fuzzy reasoning system p656
Hydrothermal generation scheduling package: a genetic based approach p451
Improved recursive Newton-type algorithm for power system relaying and measurement p15
Improved symmetrical component-based fault distance estimation for digital distance protection p739
Improved three-phase load flow using phase and sequence components p245
Inherent structure theory of networks and power system harmonics p123
Long-term hydrothermal scheduling using composite thermal and composite hydro representations p210
Measurements of grounding resistances for high impulse currents p693
Measurements of power system voltages using remote electric field monitoring p217
Method of critical distances for stochastic assessment of voltage sags p70
Method to improve digital distance relay impedance measurement when used in series compensated lines protected by a metal oxide varistor p403
Model-based analysis of protection system performance p547
Modelling of pumped-storage generation in sequential Monte Carlo production simulation p611
Monitoring and assessment of voltage stability margins using artificial neural networks with a reduced input set p355
Optimal multiobjective SVC planning for voltage stability enhancement p203
Optimal robust control design of static VAr compensators p301
Optimal weight assessment based on a range of objectives in a multiobjective optimal load flow study p65
Parallel-in-time relaxed Newton method for transient stability analysis p155
Performance of uncompensated and series capacitor-compensated 500 kV long transmission line under subnormal frequency conditions p315
Power system frequency estimation p578
Practical application of evolutionary computing to reactive power planning p753
Practical implementation of a hybrid fuzzy neural network for one-day-ahead load forecasting p687
PWM drives: voltage-type harmonic sources in power systems p293
Reactive power optimisation using an analytic hierarchical process and a nonlinear optimisation neural network approach p89
Reduction of harmonic currents generated by discharge lamp systems p363
Reduction of voltage and current distortion in distribution systems with nonlinear loads using hybrid passive filters p320
Representation and control of high speed phase shifter for an electric power system p308
Risk of fatal electric shocks at distribution network MV/LV transformer stations p463
Robust algorithm for load estimation in distribution networks p499
Selection of operating conditions for the co-ordinated setting of robust fixed-parameter stabilisers p111
Self-excited induction generator with excellent voltage and frequency control p33
Series load flow: a novel noniterative load flow method p251
Simple dynamic equivalent for fast online transient stability assessment p49
Stochastic multiobjective generation dispatch of combined heat and power systems p583
System separation mechanism in the neighbourhood of a relevant type-n UEP using the normal form of vector fields p139
Technique for contingency monitoring and voltage collapse prediction p634
Three-phase active power line conditioner planning p281
Transmission system expansion planning by an extended genetic algorithm p329
Two aspects of local redundancy in state estimation p458
Unit commitment by tabu search p56
Validation of a clustering algorithm for voltage stability analysis on the Bosnian electric power system p21
Voltage-peak synchronous closing control for shunt capacitors p233
Voltage stability and thermal limit: constraints on the maximum loading of electrical energy distribution feeders p573
Weighted-norm approach for multiobjective VAr planning p369
Worst-load-increase direction method for fast identification of voltage-weakness indicators p27

POWER TRANSMISSION AND DISTRIBUTION

Algorithm for automatic generation of fuzzy rules applied to power system controllers p161
Application of STATCOMs to wind farms p511
Artificial intelligence in diagnosis and supply restoration for a distribution network p444
Control strategy for grid-connected DC-AC converters with load power factor correction p487
Demand-side optimal selection of switching devices in radial distribution system planning p409
Design of decentralised output feedback TCSC damping controllers by using simulated annealing p553
Development of a SMES system as a fluctuating load compensator p700
Dynamic quadrature booster as an aid to system stability p41
Effect of realistic system modelling on low-voltage capacitor transient overvoltages p682
Electric field analysis for a static induction type of voltage sensor in three-phase power distribution systems p437
Electric-power-quality improvement using parallel active-power conditioners p597
Evaluation of existing optimal VAr planning tools on utility systems p663
Fuzzy inference system to assist the operator in reactive power control in distribution systems p133
Generalised bridge converter model for electromagnetic transient analysis p423
High-impedance fault identification using a fuzzy reasoning system p656
Improved symmetrical component-based fault distance estimation for digital distance protection p739
Improved three-phase load flow using phase and sequence components p245
Inherent structure theory of networks and power system harmonics p123
Intelligent system for fault diagnosis on low voltage distribution networks p592
Multi-area unit commitment for large-scale power systems p415
Multiple regression technique for estimating the insulation strength of series dielectrics on distribution systems: a statistical approach p189
Power flow control with controllable reactive series elements p493
Reconciling pool and contract dispatch in open access transmission operations p468
Reduction of voltage and current distortion in distribution systems with nonlinear loads using hybrid passive filters p320
Reliability-network-equivalent approach to distribution-system-reliability evaluation p149
Robust algorithm for load estimation in distribution networks p499
Selection of operating conditions for the co-ordinated setting of robust fixed-parameter stabilisers p111
Series load flow: a novel noniterative load flow method p251
Steady-state model of direct connected generator-HVDC converter units in the harmonic domain p559
Tabu search based approach to trouble call analysis [in LV power distribution] p731
Technical and economical optimisation of overhead power distribution line lightning protection p239
Three-phase active power line conditioner planning p281
Time-domain model for multiconductor power transmission lines p473
Transmission system expansion planning by an extended genetic algorithm p329
Voltage stability and thermal limit: constraints on the maximum loading of electrical energy distribution feeders p573
Voltage stability assessment with inclusion of hard limits p505

PROBABILITY AND STATISTICS

Arnold diffusion in a particular multi-machine power system p257
Comparative study of continuous distribution models for power system reliability evaluation p566
Improved recursive Newton-type algorithm for power system relaying and measurement p15
Method of critical distances for stochastic assessment of voltage sags p70
Modelling a positive lightning downward leader to study its effects on engineering systems p395
Modelling of pumped-storage generation in sequential Monte Carlo production simulation p611
Multiple regression technique for estimating the insulation strength of series dielectrics on distribution systems: a statistical approach p189
New multi-objective stochastic search technique for economic load dispatch p747
Possibilistic-diagnosis theory for fault-section estimation and state identification of unobserved protective relays using tabu-search method p722
Probabilistic load flow for assessment of voltage instability p196
Risk of fatal electric shocks at distribution network MV/LV transformer stations p463
Stochastic multiobjective generation dispatch of combined heat and power systems p583

PRODUCTION ENGINEERING

Algorithm for failure frequency and duration assessment of composite power systems p117
Comparative study of continuous distribution models for power system reliability evaluation p566
Cost-benefit analysis of generation additions in system planning p288
Incorporation of a UPFC model in an optimal power flow using Newton's method p336
Real-time contingency evaluation and ranking technique p517
Reliability-network-equivalent approach to distribution-system-reliability evaluation p149

RADIO SYSTEMS

Scheduling of radio-controlled heating load p641

SEMICONDUCTOR DEVICES AND MATERIALS

Development of a SMES system as a fluctuating load compensator p700

SIGNAL PROCESSING

Power system frequency estimation p578

SIMULATION, MODELLING AND IDENTIFICATION

Approach for bus frequency estimating in power system simulations p431
Comparison between evolutionary programming and a genetic algorithm for fault-section estimation p616
Design of reduced-order observer-based variable structure power system stabiliser for unmeasurable state variables p525
Parallel self-organising hierarchical neural network-based fast voltage estimation p98

STABILITY

Algorithm for automatic generation of fuzzy rules applied to power system controllers p161
Application of STATCOMs to wind farms p511

Design of decentralised output feedback TCSC damping controllers by using simulated annealing p553
Design of reduced-order observer-based variable structure power system stabiliser for unmeasurable state variables p525
Dynamic quadrature booster as an aid to system stability p41
Effects of unified power flow controllers on transient stability p182
Excitation control system for use with synchronous generators p537
Fuzzy logic based unified power flow controllers for transient stability improvement p225
Optimal multiobjective SVC planning for voltage stability enhancement p203
Optimal robust control design of static VAr compensators p301
Real-time contingency evaluation and ranking technique p517
Representation and control of high speed phase shifter for an electric power system p308
Robust decentralised control design using genetic algorithms in power system damping control p1
Selection of operating conditions for the co-ordinated setting of robust fixed-parameter stabilisers p111
Sensitivity analysis for transient stability studies p669
Voltage stability assessment with inclusion of hard limits p505

SUPERCONDUCTING MATERIALS AND DEVICES

Development of a SMES system as a fluctuating load compensator p700

SWITCHGEAR

Dynamic quadrature booster as an aid to system stability p41
Possibilistic-diagnosis theory for fault-section estimation and state identification of unobserved protective relays using tabu-search method p722

SYNCHRONOUS MACHINES

Adaptive protection strategies for detecting power system out-of-step conditions using neural networks p387
Approach for bus frequency estimating in power system simulations p431
Excitation control system for use with synchronous generators p537
Sensitivity analysis for transient stability studies p669
Steady-state model of direct connected generator-HVDC converter units in the harmonic domain p559
Synchronous generator internal fault computation and experimental verification p604

TRANSFORMERS

Loss and current distribution in foil windings of transformers p709
Risk of fatal electric shocks at distribution network MV/LV transformer stations p463
